Unifiedtree CRM User Guide

Nov 4, 2026 · @surya

Introduction

Unifiedtree CRM keeps customers, deals, orders, stock, deliveries, invoices and support in one place, and each person sees a workspace built for their role.

The guide covers three roles. What each person can do is a default that an Admin can change in Access control, so your own screens may differ.

Role	Main job	Sees data for
Sales Person	Follow up leads, win deals and look after customers	Their own records
Manager	Coach the team, approve transfers and assign leads	Their team
Admin	Run the company, set up the CRM and control access	The whole company

Logging in

1. Open the CRM. If there is more than one company, choose yours.
2. Click a role, or enter a demo email and press **Continue**.
3. If an Admin has turned on passwords, enter your email and password instead.

Finding your way around

Where	What it does
Sidebar, left	Your pages, grouped by job. The arrow at the top collapses it.
Your name, bottom of the sidebar	Your profile, View as, the Light and Dark switch, and Log out. Settings and administration pages live here too.
Search bar, or Ctrl K	Finds pages and records.

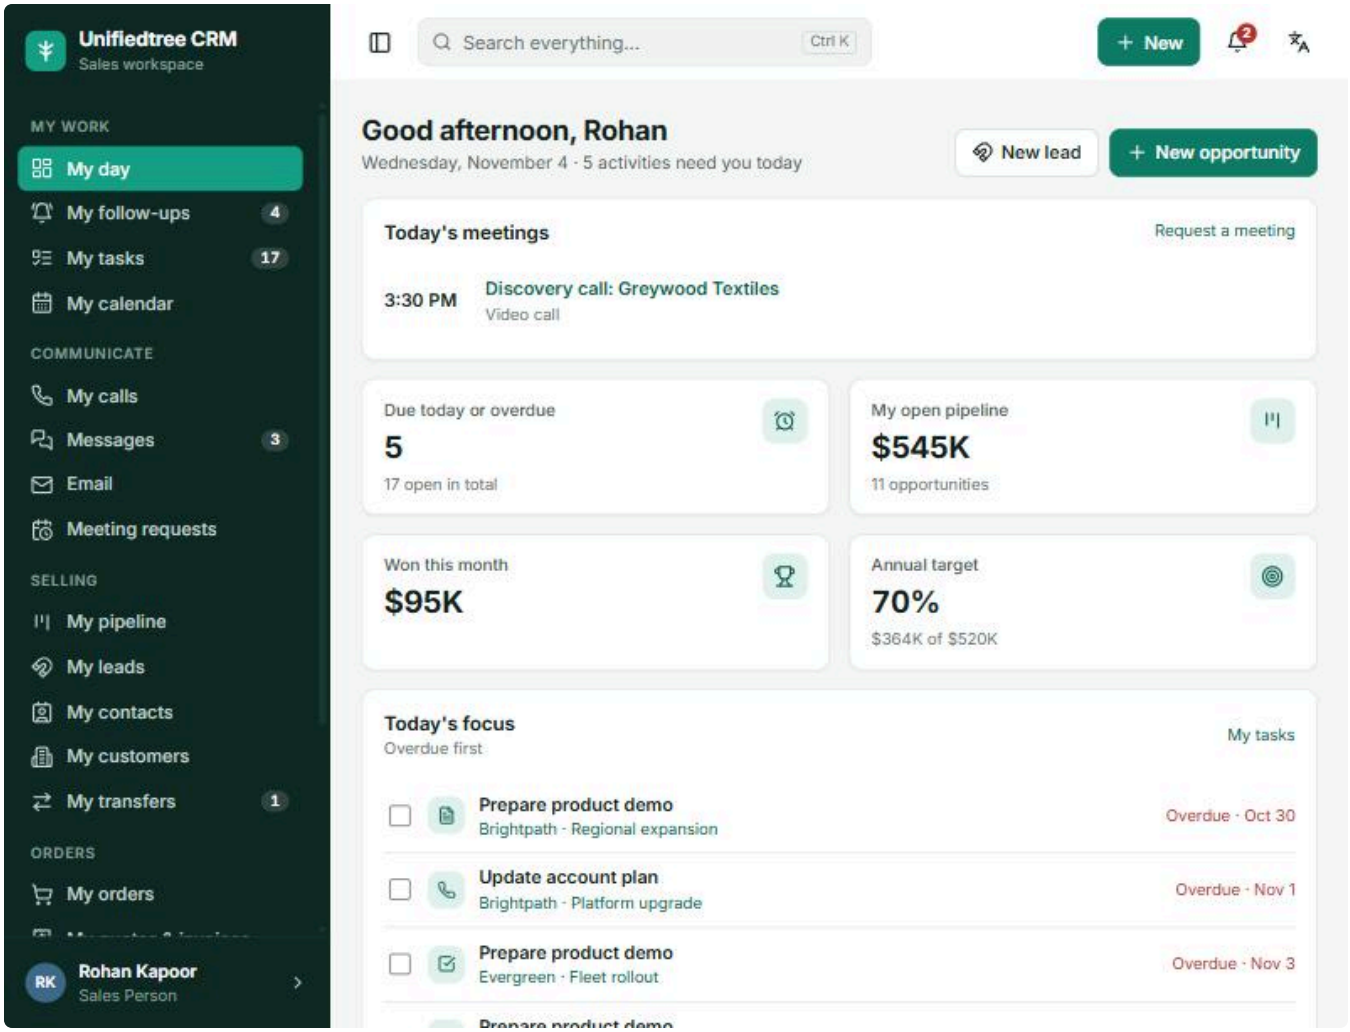

Where	What it does
New, top right	Creates an opportunity, lead, contact or customer.
Bell, top right	Your alerts.
Language icon, top right	Translates the page using Google Translate.

1. Sales Person

A Sales Person works their own leads, deals and customers, and sees only their own records. Screenshots show the demo user Rohan Kapoor with sample data.

By default, a Sales Person can't delete records, approve transfers, create invoices, or open Settings. An Admin can change this in Access control.

My day

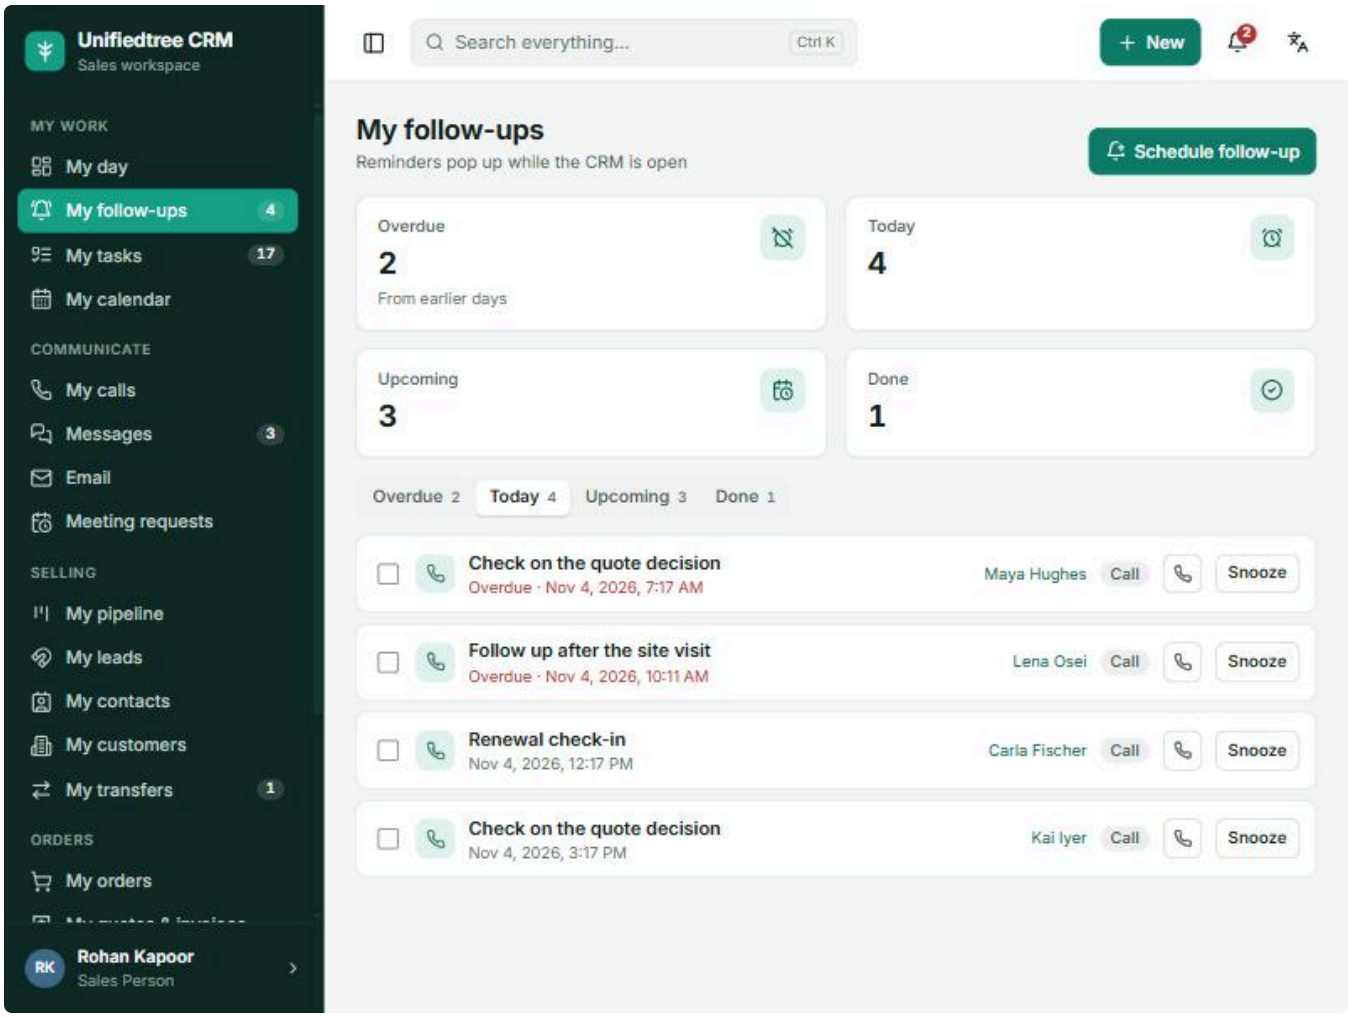

What you see: today's meetings, activities due, open pipeline, wins this month and progress to your annual target. Further down are Today's focus, follow-ups, deals closing soon and new leads.

What you can do:

- Tick off a task as done.
- Open a meeting, or click **Request a meeting**.
- Create a lead or an opportunity from the buttons at the top.

My follow-ups

What you see: reminders to contact people, grouped as Overdue, Today, Upcoming and Done.

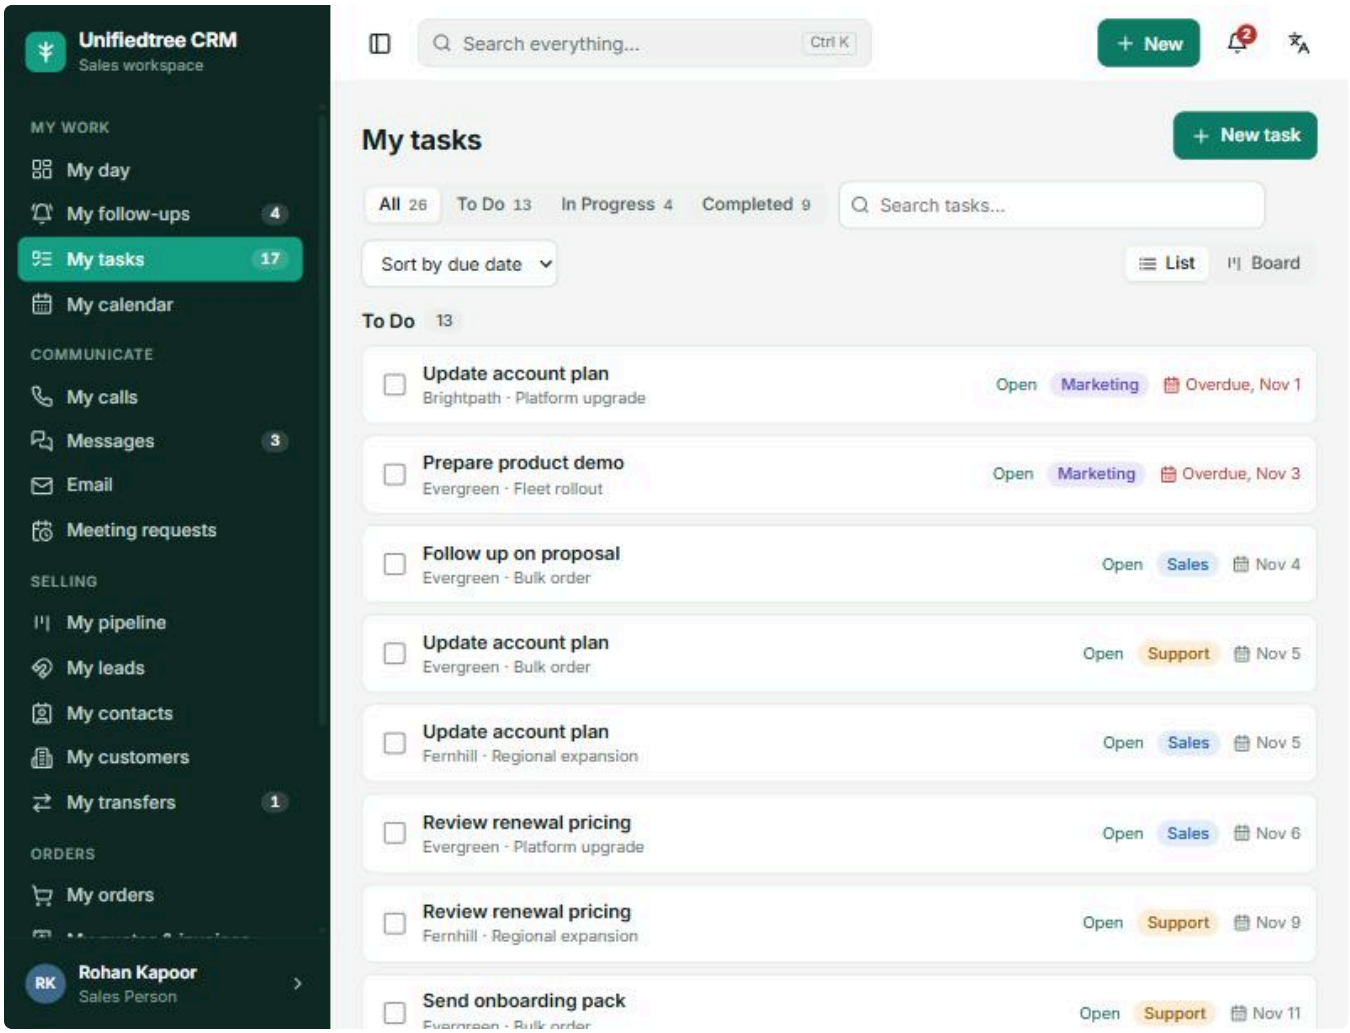

What you can do:

- Schedule a follow-up with a time, channel and reminder.
- Call, video call or WhatsApp straight from a row.

- Snooze a reminder, or tick it as done.

A reminder pops up at its time while the CRM is open.

My tasks

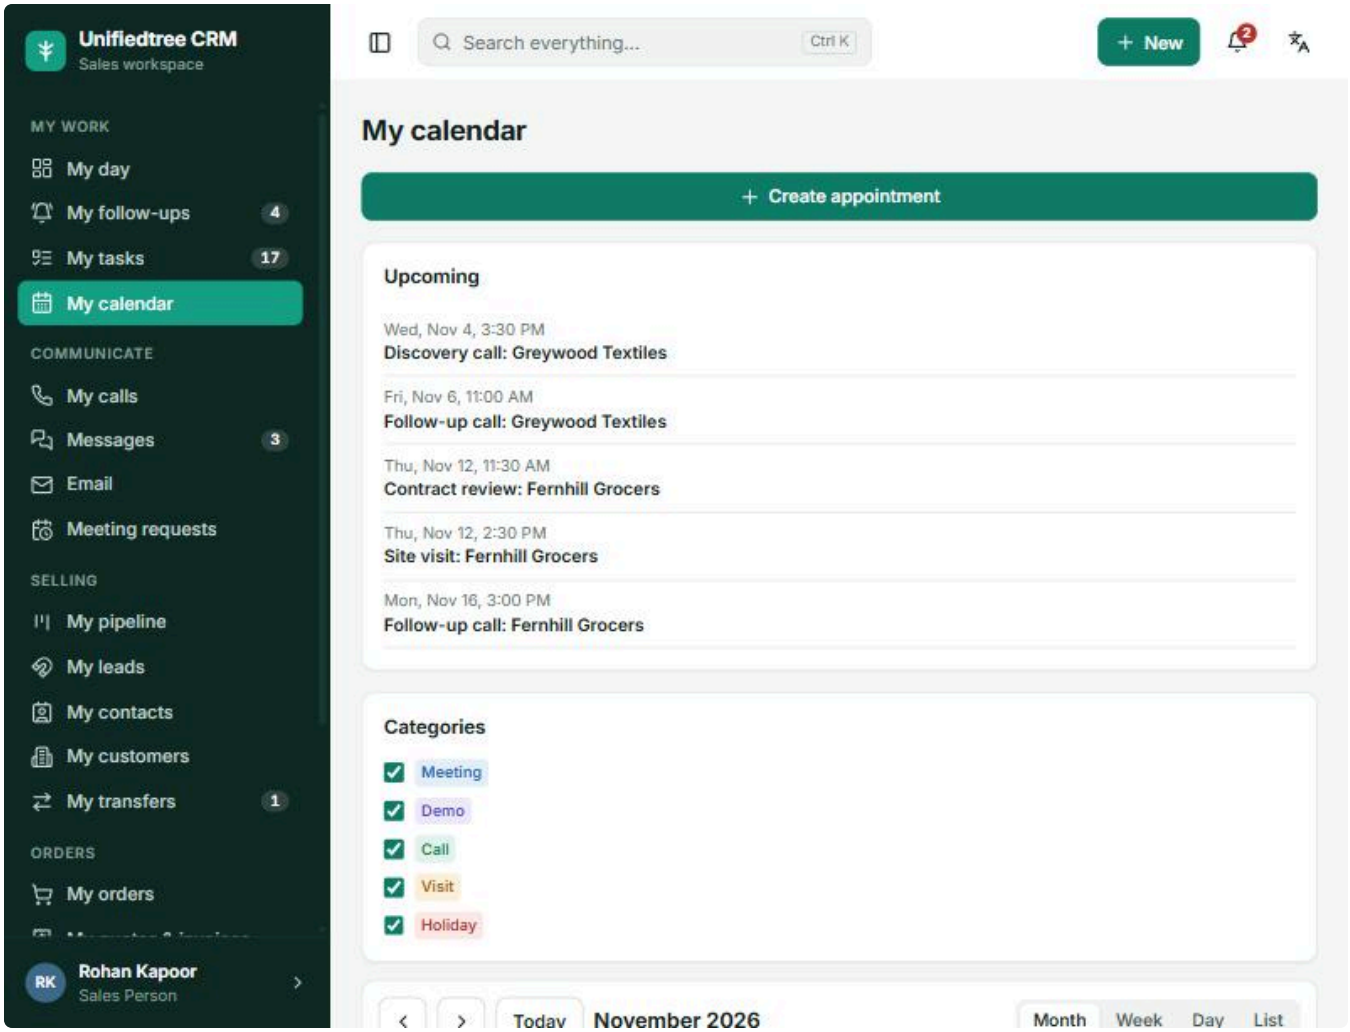

What you see: your tasks by status, as a list or a board, each with its deal or customer, tag and due date.

What you can do:

- Create and edit tasks, and mark them done.
- Search, sort, and switch between List and Board.

My calendar

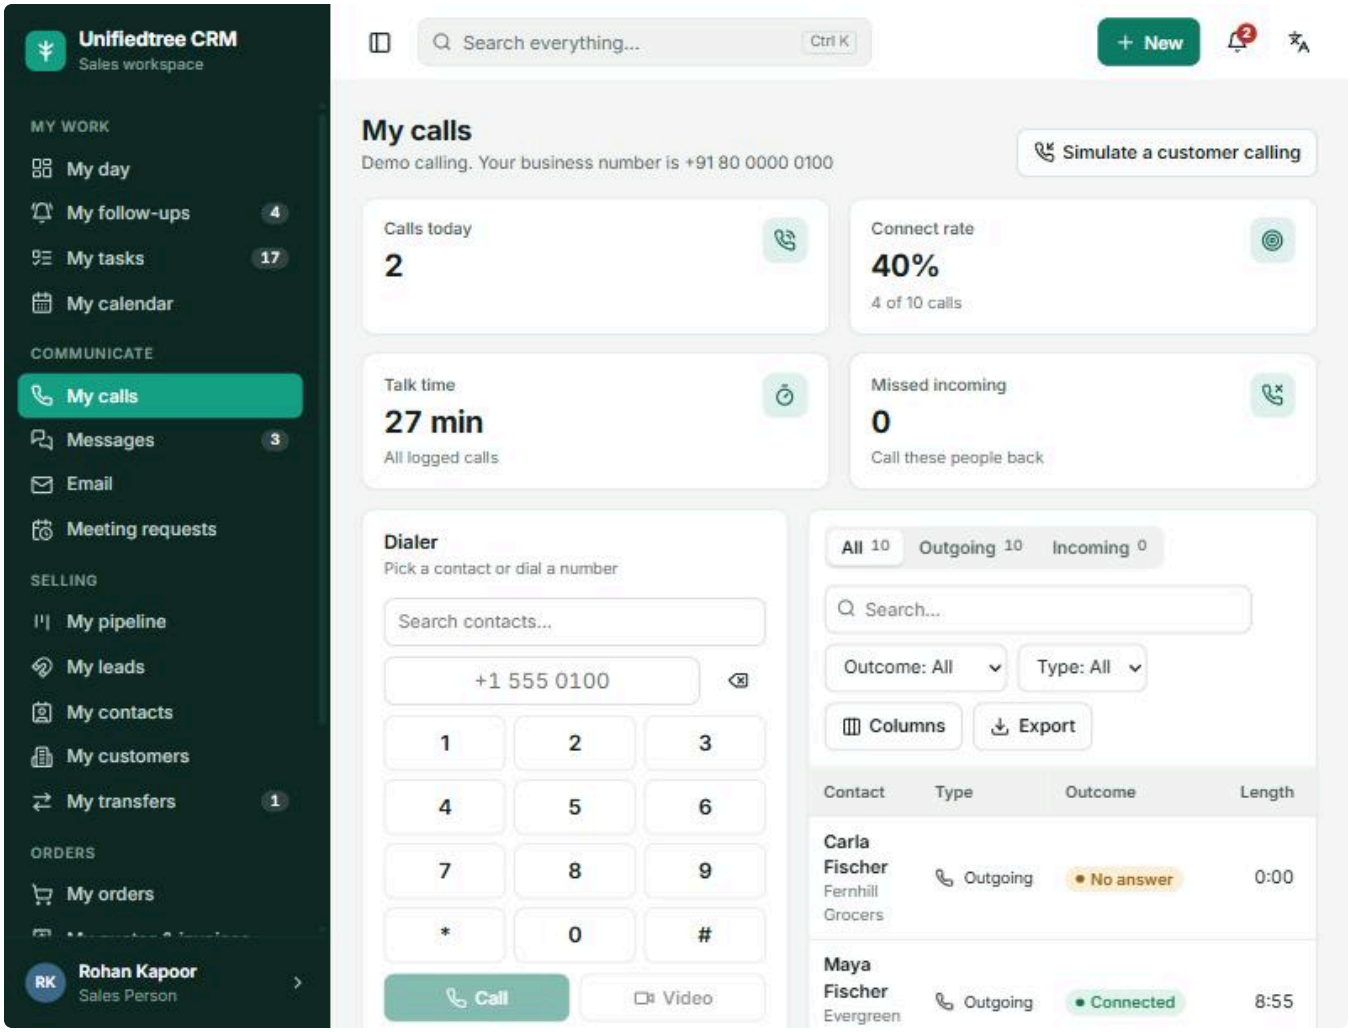

What you see: upcoming appointments and a calendar with Month, Week, Day and List views.

What you can do:

- Create and edit appointments on your own calendar.
- Show or hide categories such as Meeting or Demo.

My calls

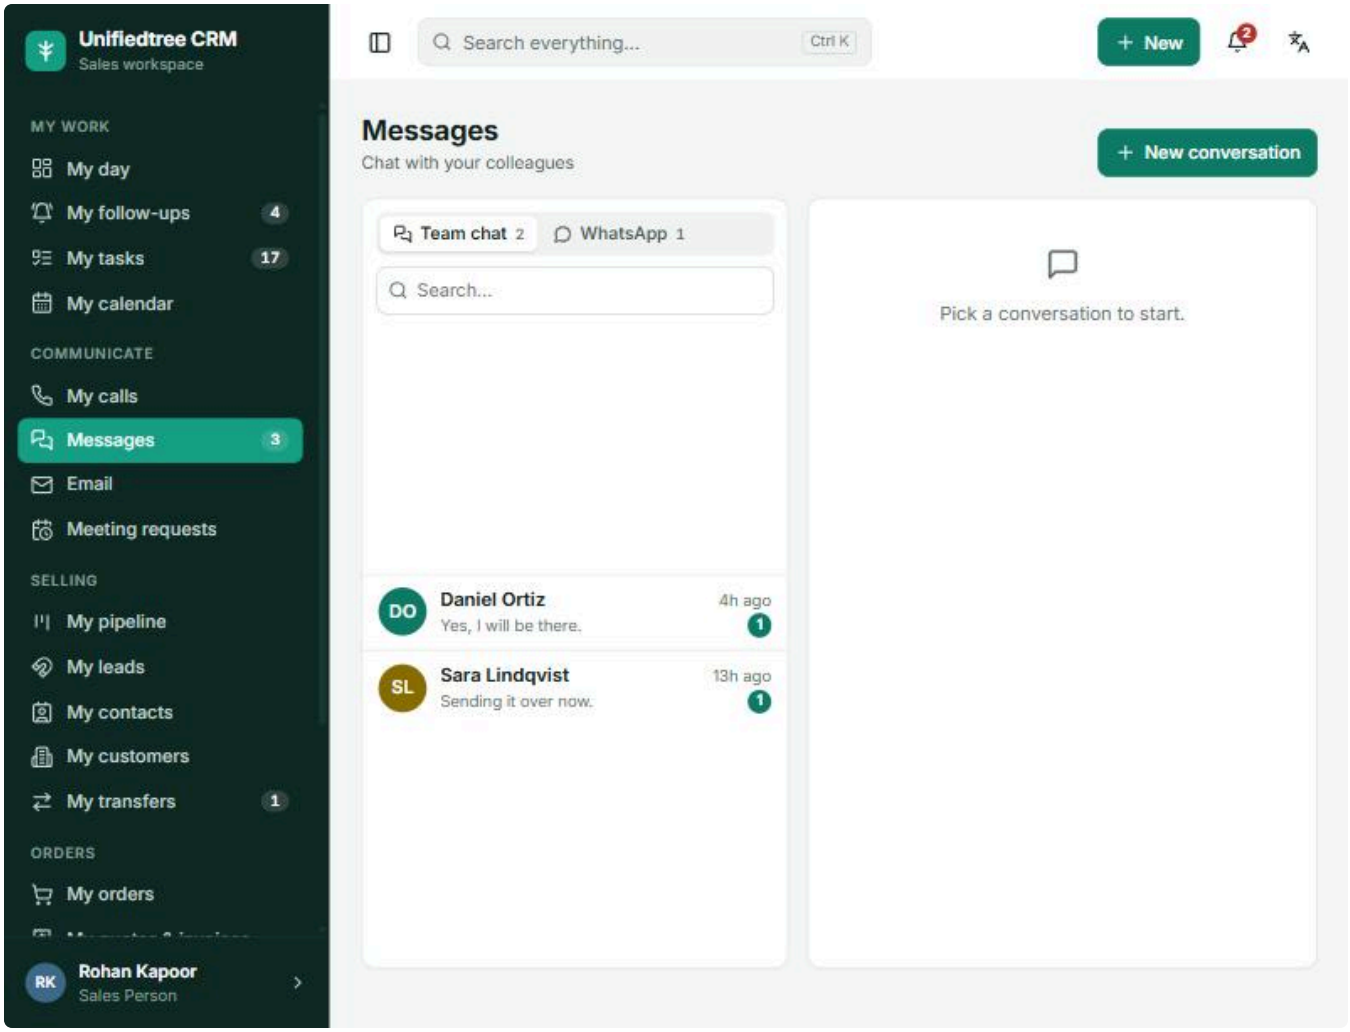

What you see: today's calls, connect rate, talk time, missed calls, a dialer and your call log.

What you can do:

- Search a contact or dial a number, then call or video call.
- Save the outcome and notes after a call, and schedule a follow-up.
- Click **Simulate a customer calling** to see how a callback rings your phone, then your manager's, then the Admin's. A missed call adds an alert and a callback follow-up.

Calls are simulated. See the last section of this guide.

Messages

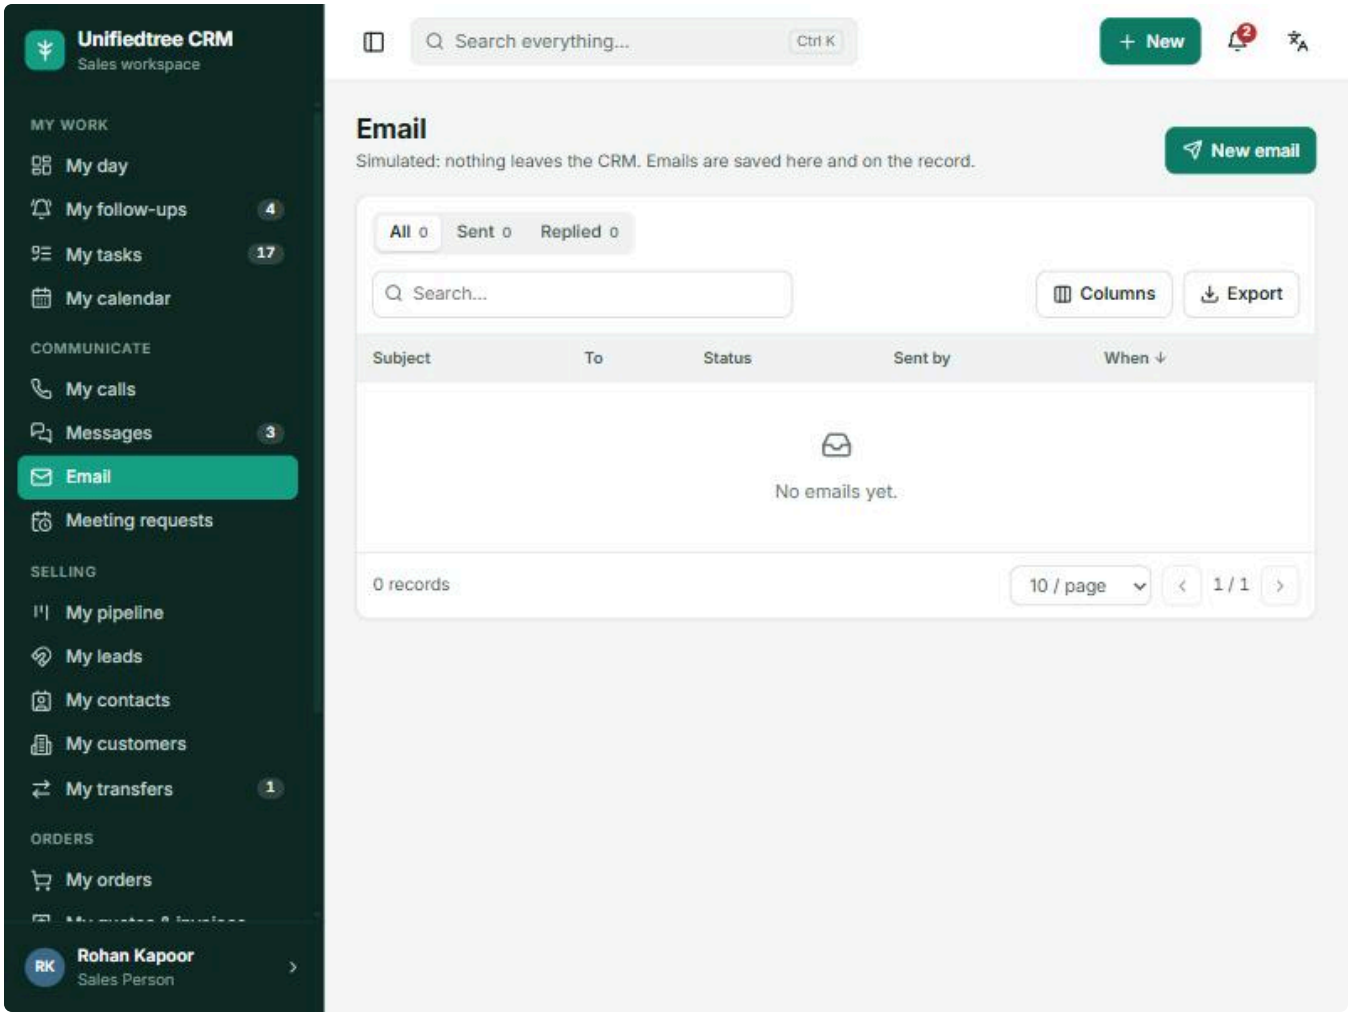

What you see: team chats and WhatsApp conversations, with unread counts.

What you can do:

- Message any colleague, including the Admin.
- Start a WhatsApp conversation with a contact and insert a template.

Email

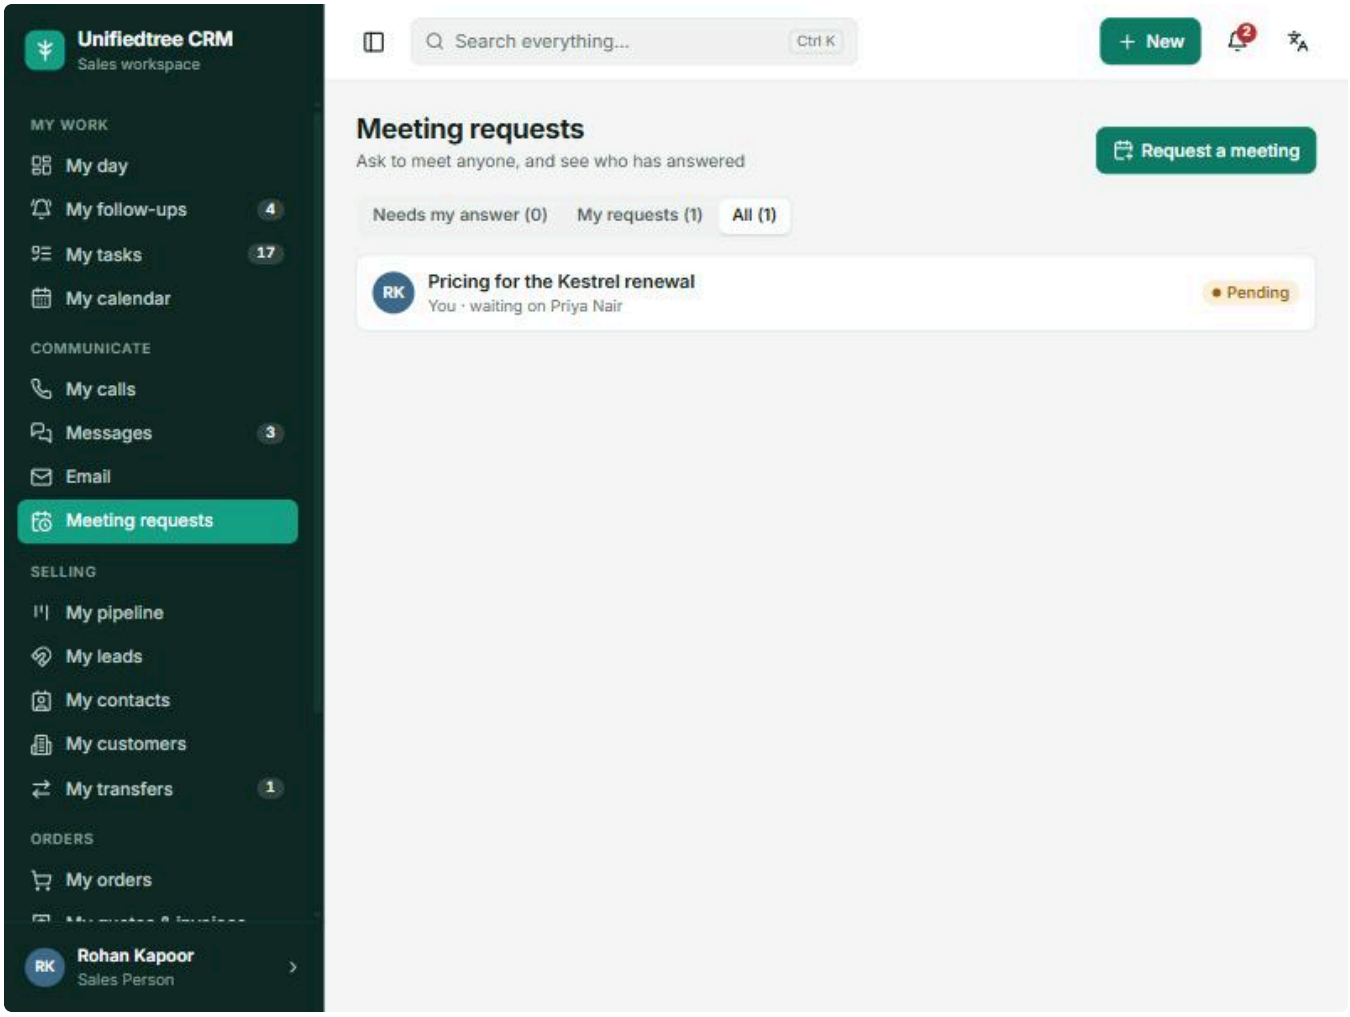

What you see: emails you've sent and replies, including any sent by automation.

What you can do:

- Write an email, using a template if you like. It's saved as sent, but no real email goes out.
- Open an email and simulate the customer's reply.

Meeting requests

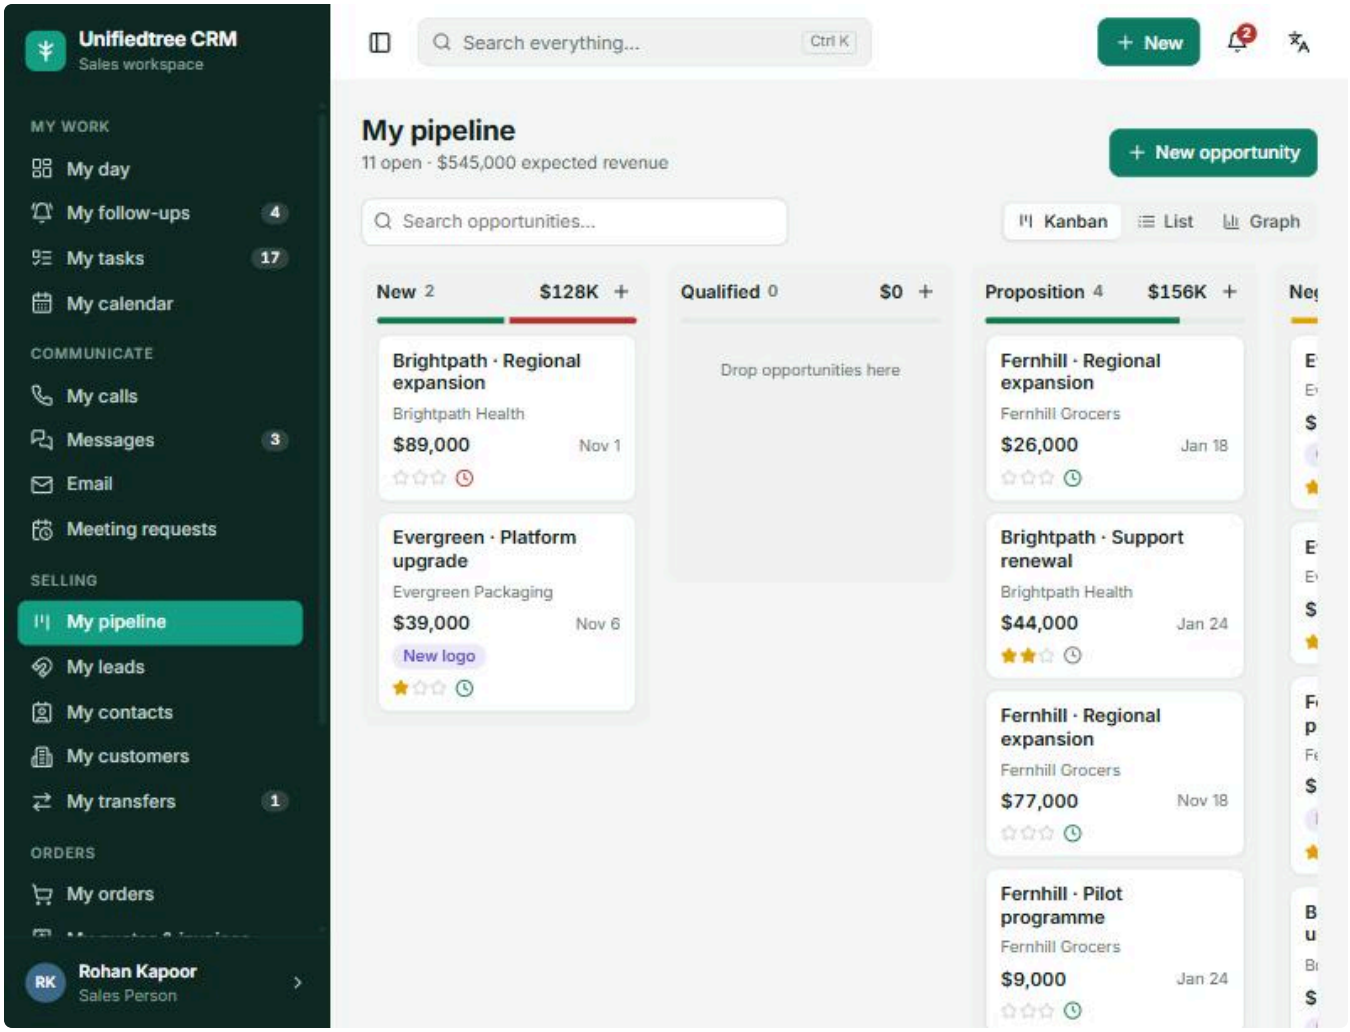

What you see: requests waiting for your answer, your own requests, and who each one is waiting on.

What you can do:

1. Click **Request a meeting** and choose the person, topic, time and length.
2. Follow its progress. You get an alert if it's accepted, declined or passed to someone else.
3. Withdraw a request while it's still waiting.
4. If a request is sent to you, accept and set the time, decline, or pass it on.

An accepted meeting appears on your calendar and in Today's meetings, with a reminder 15 minutes before.

My pipeline

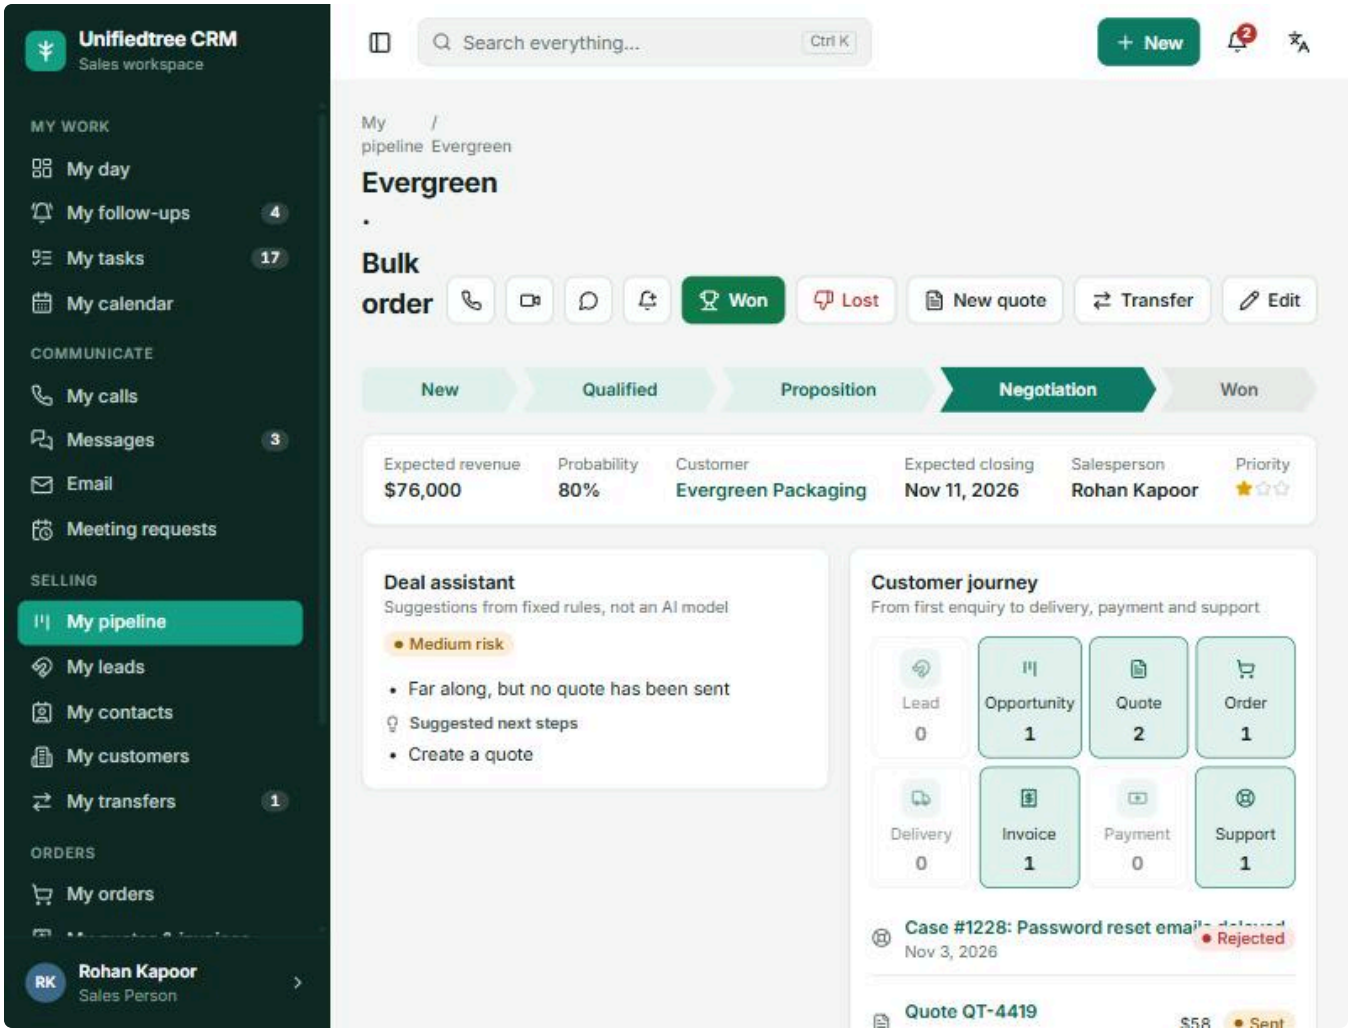

What you see: your open deals in columns by stage, with the value of each stage. You can also view them as a list or a graph.

What you can do:

- Drag a deal to another stage.
- Add a deal to a stage with the plus button, or use **New opportunity**.
- Search your deals.

Opportunity record

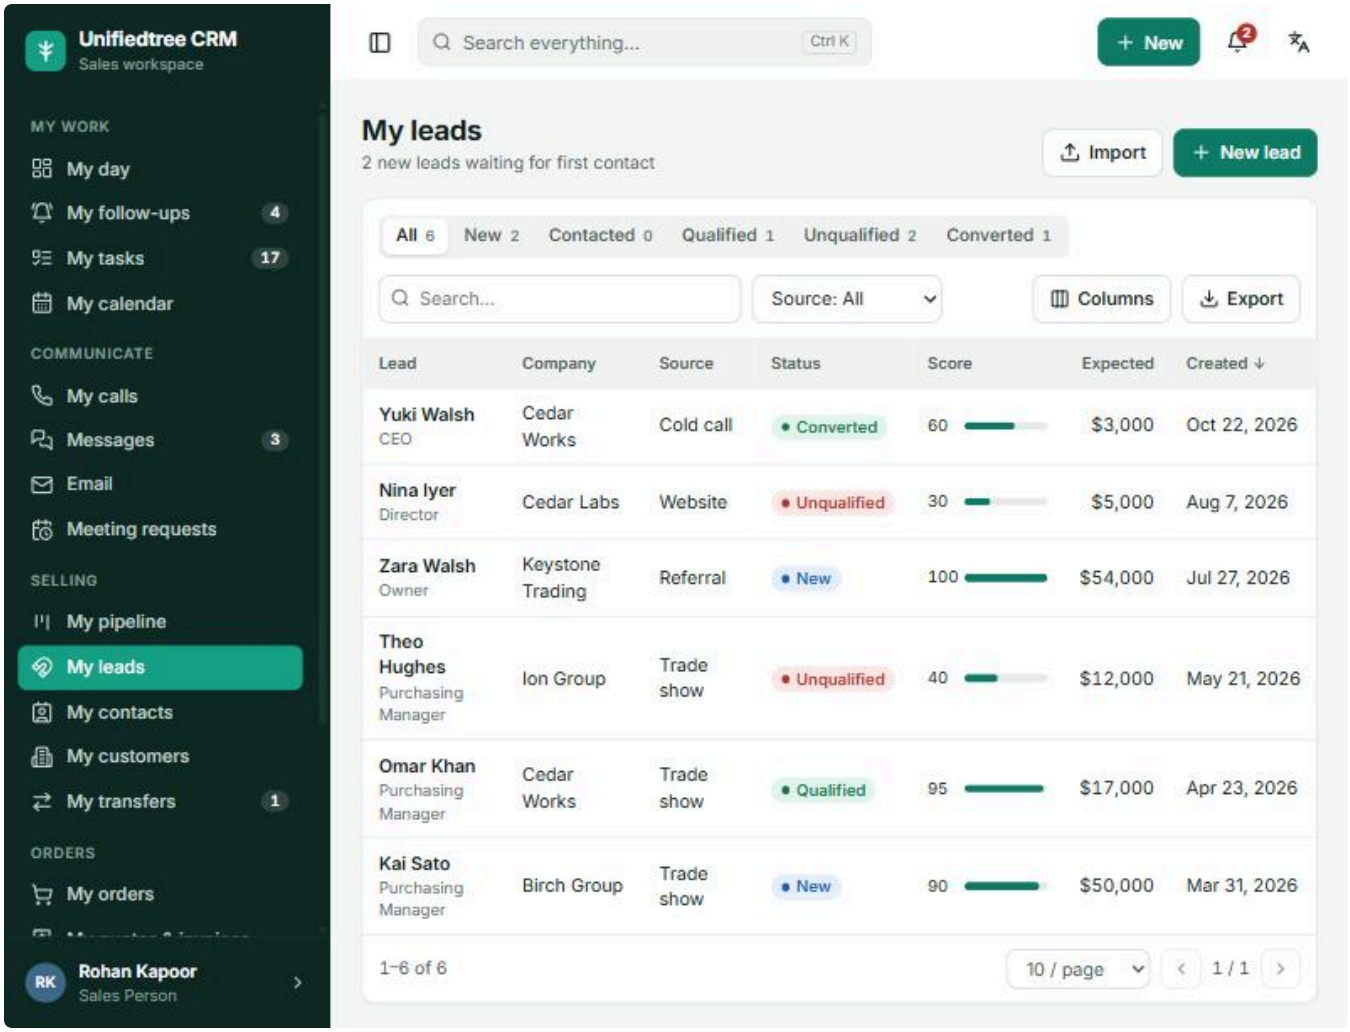

What you see: the stage bar, revenue, probability, closing date, the deal assistant's suggestions and the customer's journey. Below are details, quotes, notes and history.

What you can do:

- Mark it Won or Lost, or reopen it. A lost deal asks for a reason.
- Call, message or schedule a follow-up with the contact.
- Create a quote, log a note, schedule a to-do or edit the deal.
- Ask to transfer it to a colleague.

The deal assistant uses fixed rules, not artificial intelligence.

My leads

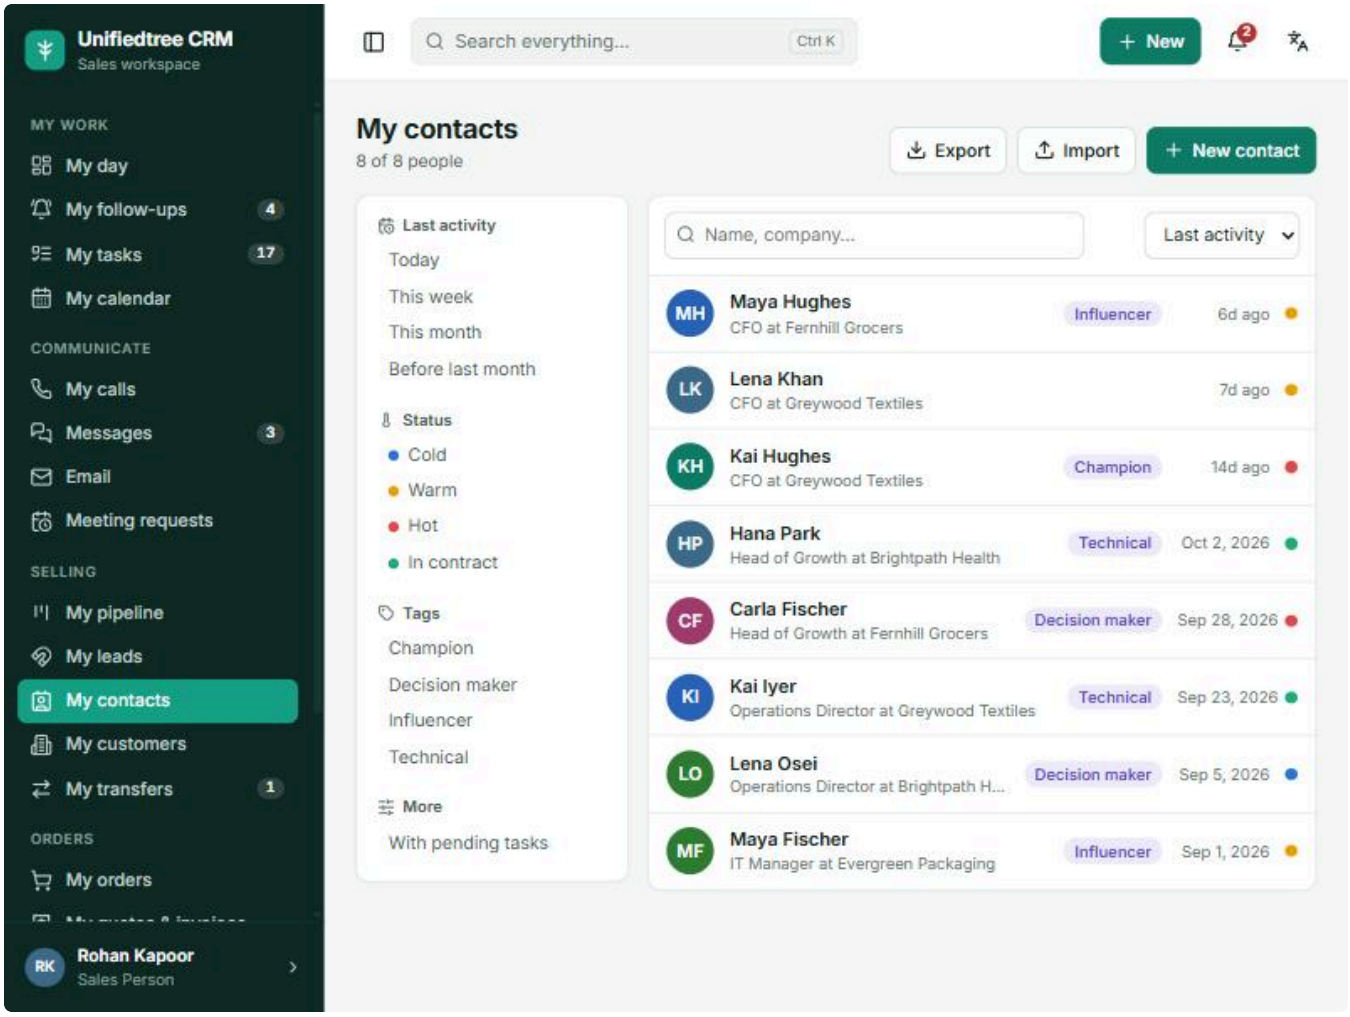

What you see: your leads with status, source, score and expected revenue. Opening a lead shows why it got its score.

What you can do:

- Add a lead, or import many from a CSV file.
- Contact a lead, then convert it to an opportunity, which also creates the customer and contact.
- Mark it unqualified, or export the list.

My contacts

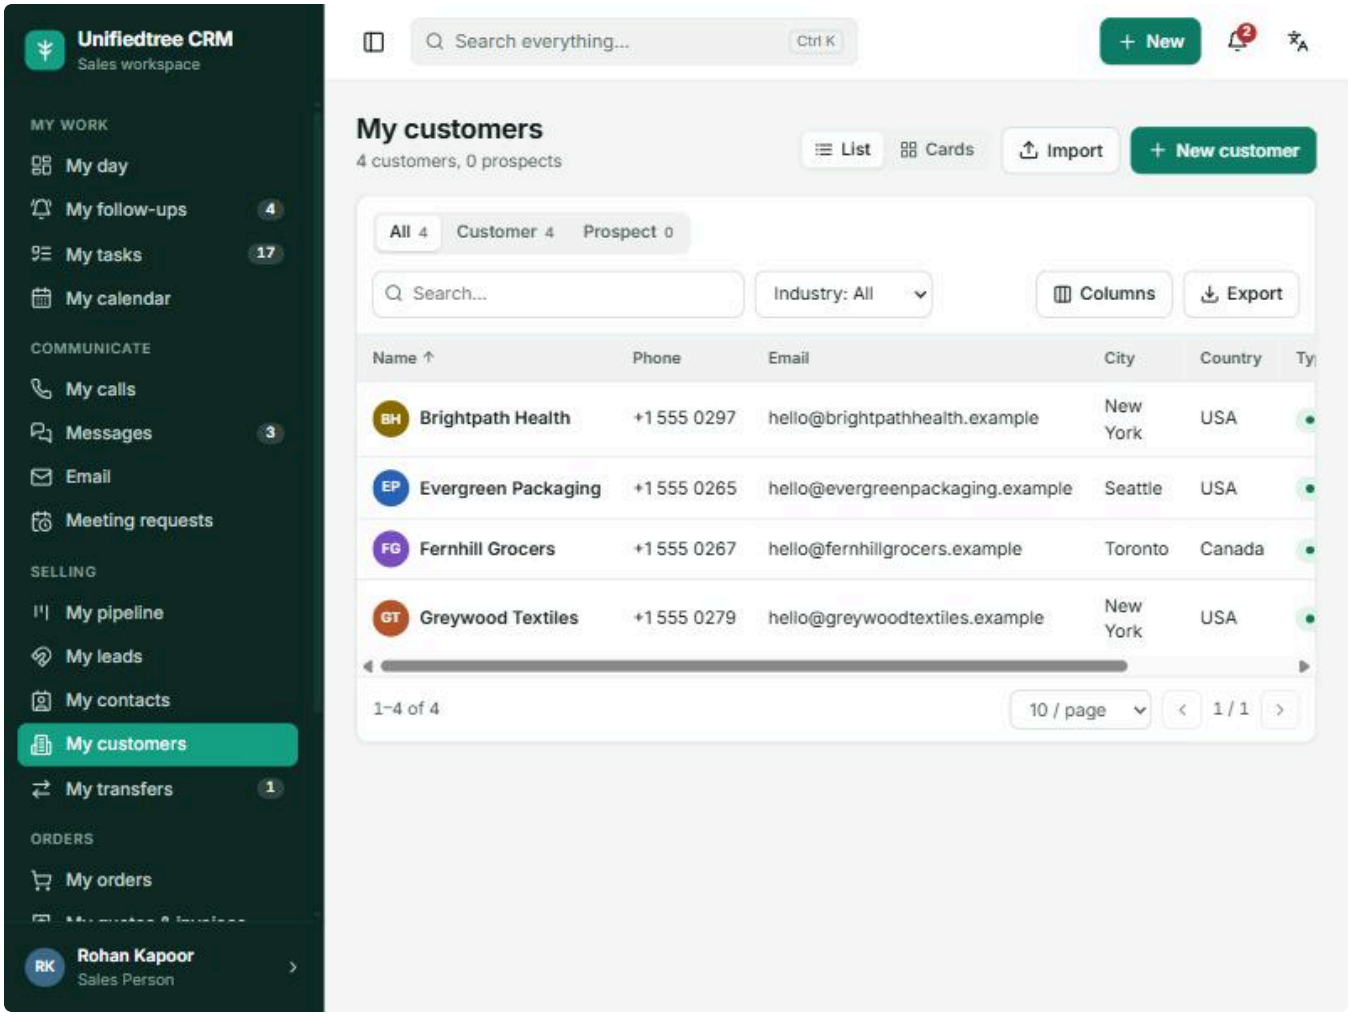

What you see: the people you look after, with filters for last activity, status and tags.

What you can do:

- Add, edit or import contacts.
- Call, message or schedule a follow-up.
- See their open deals and history, and export the list.

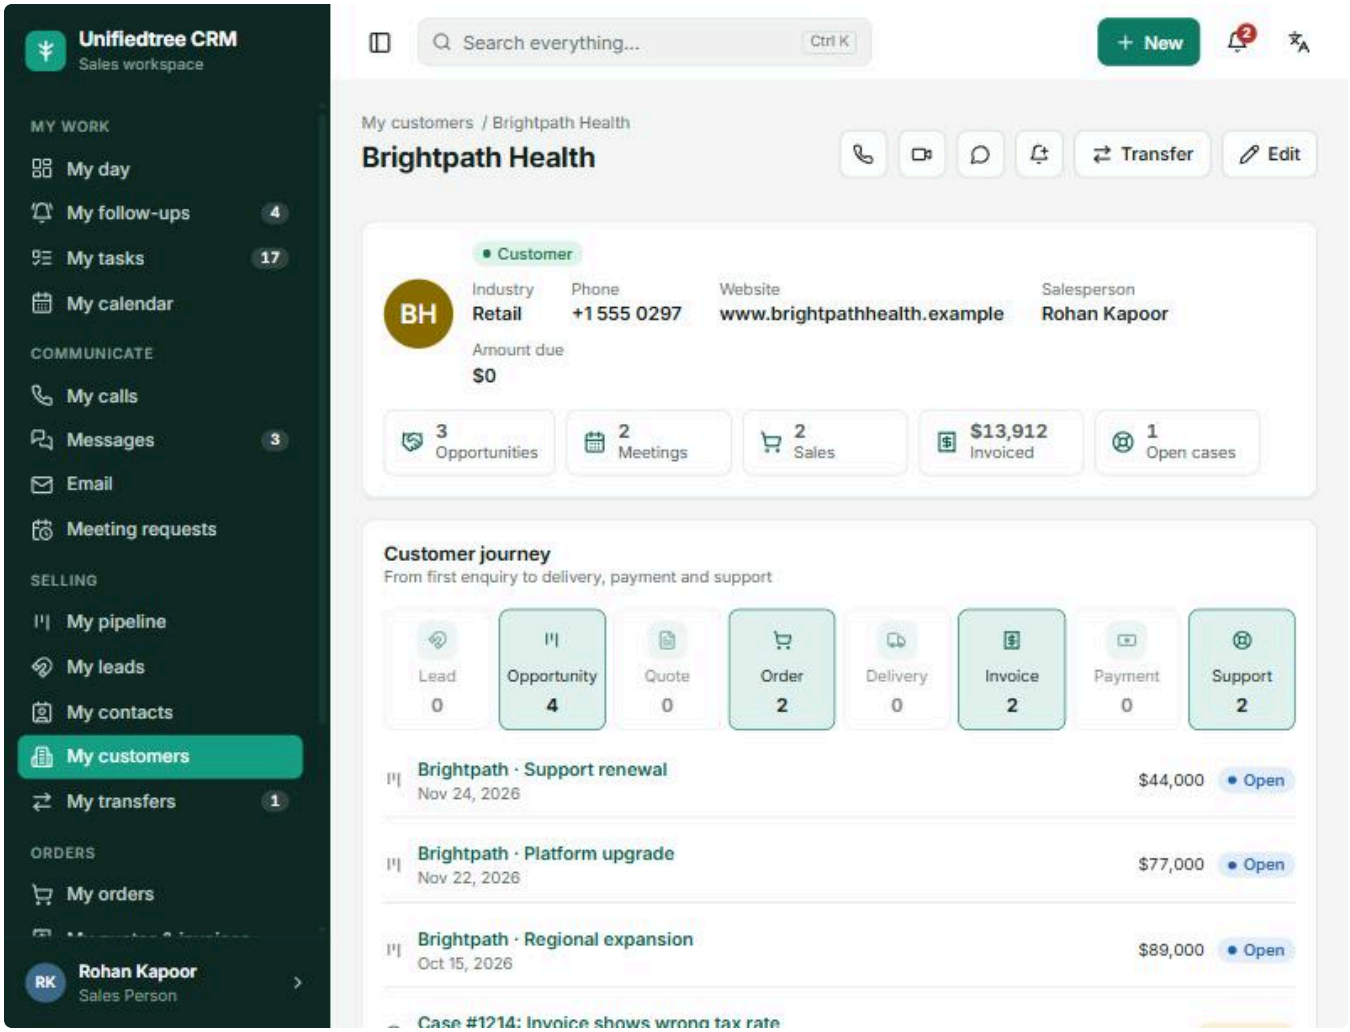

My customers

What you see: your customers and prospects, as a list or cards.

What you can do: add, import, search, filter and export customers.

Customer record

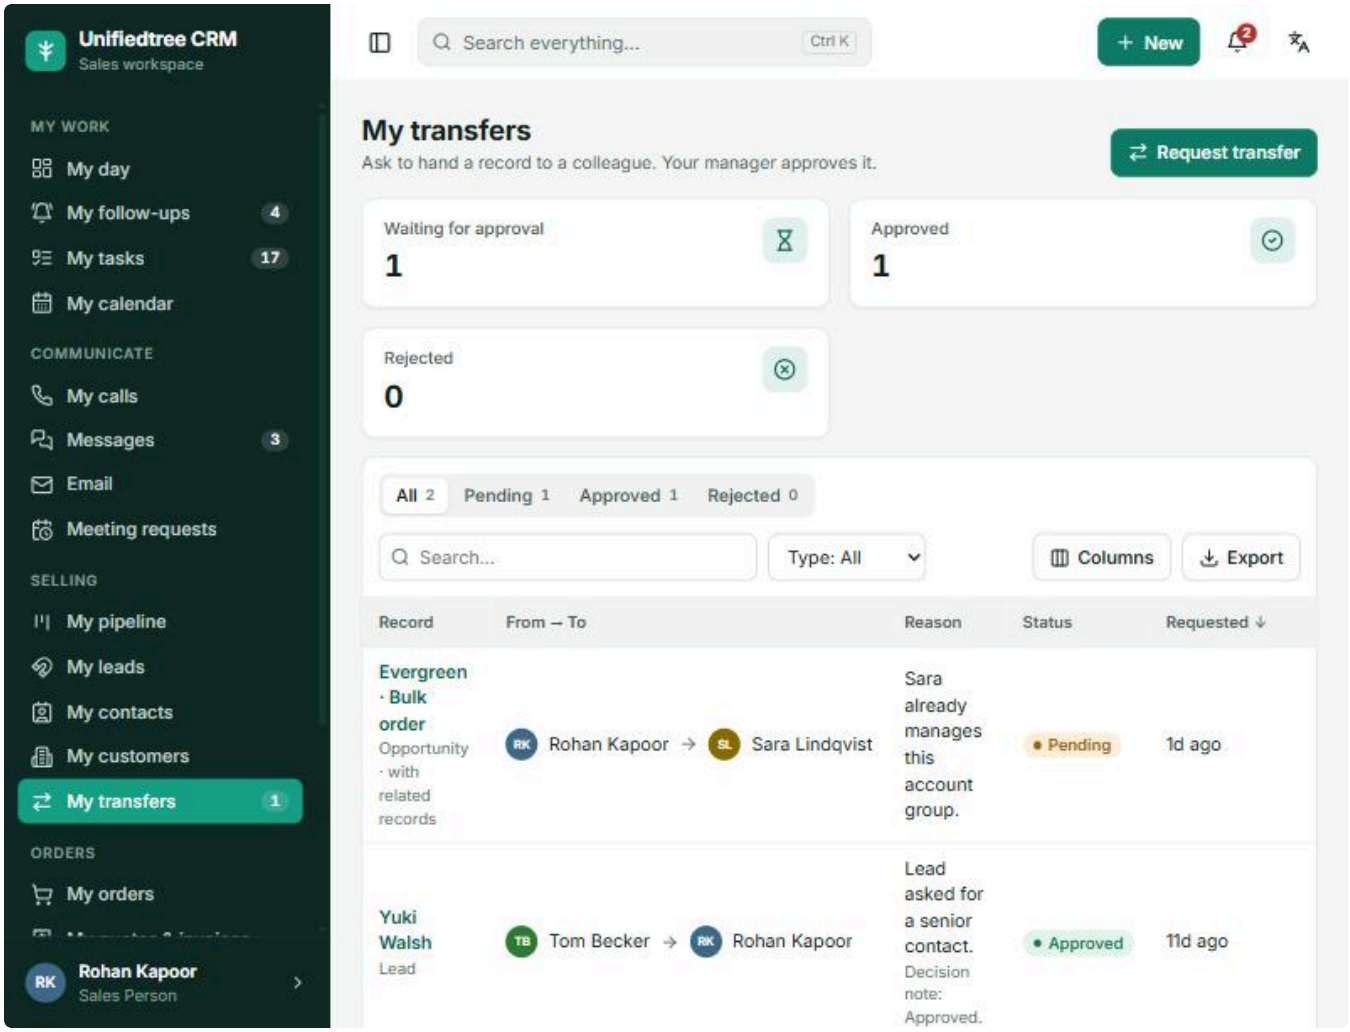

What you see: contact details, amount due, shortcuts to deals, meetings, sales, invoices and cases, and the customer journey from enquiry to support.

What you can do:

- Contact them, edit details, and log notes and to-dos.
- Click any journey item to open it.
- Ask to transfer the customer to a colleague.

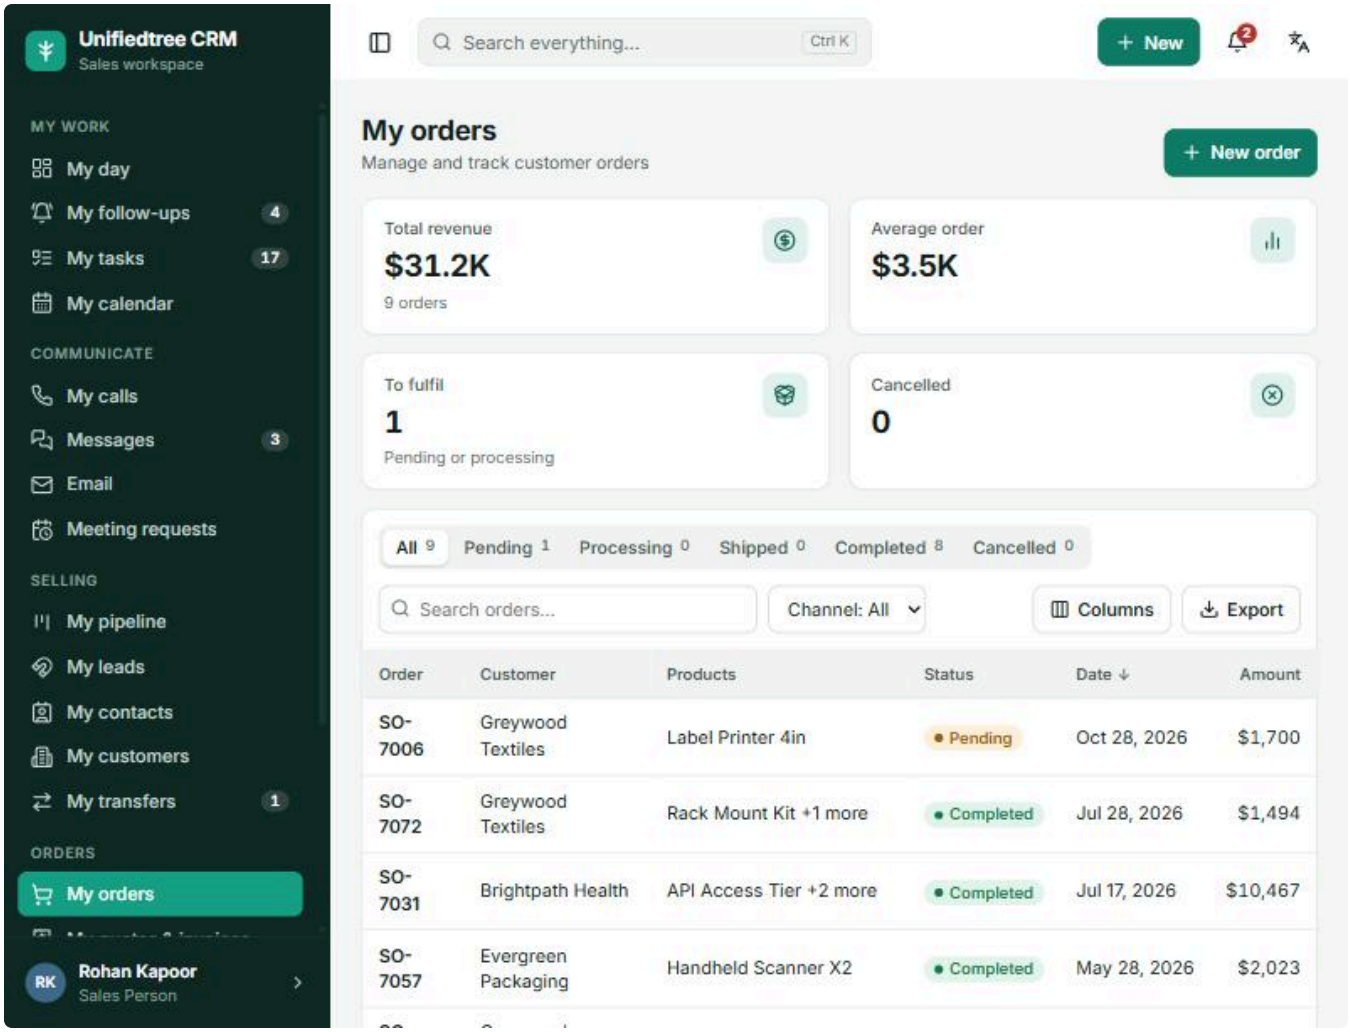

My transfers

What you see: records you've asked to hand over, and their status.

What you can do: click **Request transfer**, choose the record and colleague, and give a reason. Ownership only changes once your manager approves.

My orders

What you see: your orders, revenue, average order value and what's still to fulfil.

What you can do: create an order and track its status. Other people complete or cancel orders by default.

My quotes and invoices

Image — My quotes and invoices page

What you see: your quotes and invoices, with amounts invoiced, collected and outstanding.

What you can do:

- Create a quote, mark it sent or rejected, or convert it to an order.

- Print or save it as a PDF, or email it to the customer.

Creating invoices and recording payments are off by default for this role.

Product catalogue

Image — Product catalogue

What you see: products with price, category and stock status.

What you can do: browse and search, in a grid or a list. This page is read-only for this role.

My cases

Image — My cases page

What you see: support cases for your customers, with status, priority and type.

What you can do: create and update cases, and add to each case's history.

My forecast

Image — My forecast page

What you see: expected and weighted revenue by closing month, and deals past their expected closing date.

What you can do: read the numbers and open a deal. Weighted revenue is the deal value multiplied by its probability.

My performance

Image — My performance page

What you see: revenue won, win rate, average deal size, rank on your team, progress to target and why you lost deals.

What you can do: read your results. This page is view-only.

Your account

Image — The account panel

Click your name at the bottom of the sidebar.

What you can do:

- Open **My profile** to change your name, job title, phone and password.
- Use **View as** to see the demo as another person.
- Switch between Light and Dark, or log out.

2. Manager

A Manager has everything a Sales Person has, for their whole team, plus approvals, lead assignment, coaching and team reports. Screenshots show the demo user Daniel Ortiz.

Calls, messages, email, meeting requests, follow-ups, contacts, customers, orders, quotes, invoices, products and cases work as described for the Sales Person, but show the team's records. This section covers what is different.

Team dashboard

Image — Team dashboard, top

What you see: today's meetings, then the **Coaching** table. For each person, it shows open deals, stuck deals, late follow-ups, overdue tasks and calls this week.

Image — Team dashboard, further down

Further down are team target, pipeline, weighted forecast and approvals waiting for you, plus the rep scorecard, deals at risk and new leads to assign.

What you can do:

- Click the **Look at** text beside a person to open their first stuck deal.
- Open the team forecast or pipeline from the top buttons.

A deal counts as stuck after 14 days with no activity.

My team

Image — My team page

What you see: open deals, pipeline, wins, progress to the annual target, and what each member has won.

What you can do: edit the team's details, including its target and members.

Transfer approvals

Image — Transfer approvals page

What you see: requests from your team to hand over records, with the reason for each.

What you can do:

- Approve or reject a request. Everyone involved gets an alert.
- Use **Move a record** to transfer a record yourself, with no approval needed.

Team pipeline

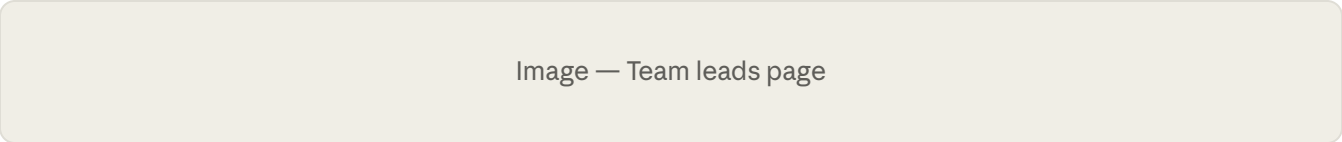

Image — Team pipeline by salesperson

What you see: the team's deals by stage, or in the **By rep** view by person. You can also see a list or a graph.

What you can do:

- Filter by salesperson and open any deal.
- Create, edit, move and delete deals on your team.

Team leads

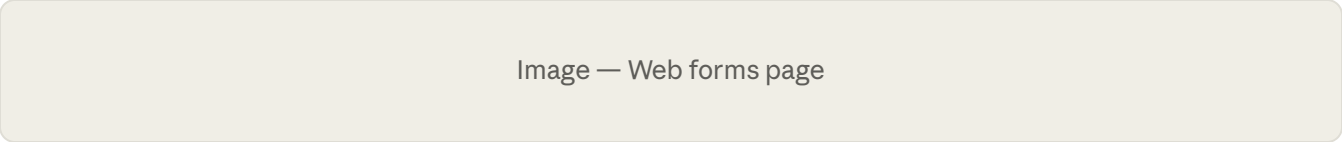

What you see: all your team's leads, with score and salesperson.

What you can do:

- Tick leads and use **Assign to** to give them to someone.
- Add, import or delete leads, and convert them to opportunities.
- **Generate leads** creates sample leads for demos only.

Web forms

What you see: your company's website forms and how many enquiries each received.

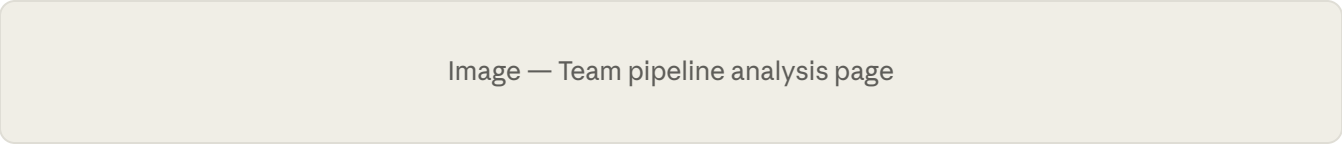

What you can do: open a form or copy its embed code. Only someone with edit permission can create or change forms, which is the Admin by default.

Team activities and calendar

These look like My tasks and My calendar, but show the whole team.

What you can do: filter by person, and assign tasks and appointments to team members. The person gets a bell alert when you add an appointment to their calendar.

Team pipeline analysis

What you see: opportunities, value won and lost, and win rate.

What you can do: change the measure, group by stage or other options, filter by open, won or lost, switch between bar, line and donut charts, and export.

Team leads analysis

Image — Team leads analysis page

What you see: leads created over time, conversion rate, and a breakdown by source or other groupings.

What you can do: change the breakdown and read the detail table.

Team audit trail

Image — Team audit trail page

What you see: changes made by your team: who did what, on which record, and when.

What you can do: filter by person, action, record type or date, open the details of a change, and export the list.

3. Admin

An Admin sees the whole company, sets up the CRM, and decides what everyone else can do. Screenshots show the demo user Priya Nair.

By default, the Admin oversees sales rather than selling. They can see and edit deals and leads, but creating deals and leads, making calls, and tasks are off. An Admin can turn any of these on for themselves in Access control.

Company overview

Image — Company overview

What you see: today's meetings, requests waiting for an answer, and coaching across every team. Further down are revenue, pipeline, unpaid invoices, active users, revenue by team, team targets, items needing attention, operations and recent activity.

What you can do: jump to Access control, the Audit log, or Users & roles, and open anything that needs attention.

Switching and adding companies

Image — Company menu

Click the company name at the top of the sidebar.

What you can do:

- Switch to another company. Each one keeps its own customers, deals, users, settings and audit log.
- Add a company, which starts empty.
- Delete a company from Settings > Data, after typing its name to confirm. This can't be undone, and the last company can't be deleted.

The Administration menu

Image — The Admin's account panel

Click your name at the bottom of the sidebar. Users & roles, Access control, Sales teams, Audit log, Automation, Connected apps and System settings all open from here.

Users & roles

Image — Users and roles page

What you see: everyone in the company, with their role, team, open deals, revenue won and status.

What you can do: add people, change their role or team, deactivate them, and open their personal access.

Access control

Image — Access control page

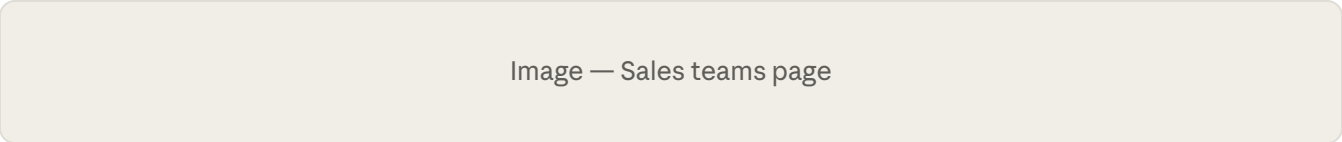

What you see: a grid of every module for each role, or for one person.

What you can do:

- Turn View, Create, Edit and Delete on or off per module.
- Show or hide individual sections and tabs.
- Allow special actions, such as assigning leads or approving transfers.
- Set whether someone sees their own, their team's or all company data.
- Give one person different access from the rest of their role.
- Hand this control to someone else, by giving them Access control, Settings, Users or Companies.

Changes apply straight away and are saved in the audit log. An Admin can't lose their own access to Access control, Settings, Users or the Audit log, so nobody gets locked out.

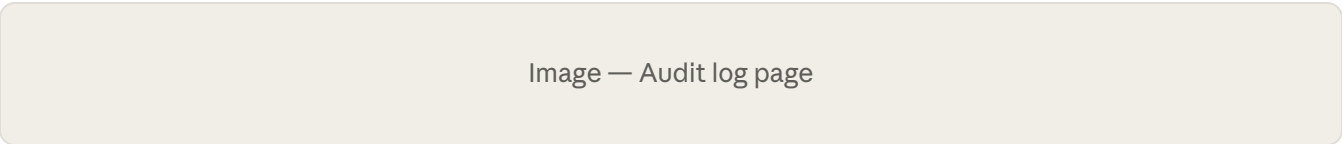

Sales teams

What you see: every team, with its pipeline, wins, target and members.

What you can do: create and edit teams, set targets, and choose team leaders and members.

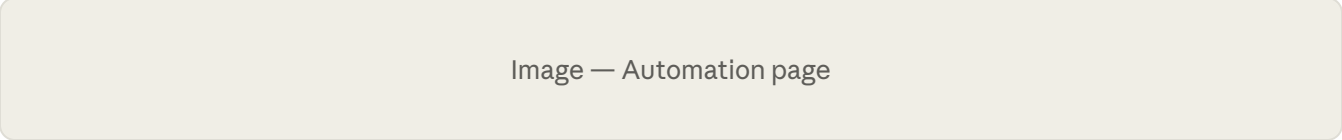

Audit log

What you see: every change by everyone, including automation runs and connections.

What you can do: filter, open the details of a change, and export the list.

Automation

What you see: your rules, whether each is on, and how many times it has run.

What you can do:

1. Click **New rule** and choose when it runs, such as when a deal is won.
2. Optionally add conditions, such as expected revenue over 25,000.
3. Choose the actions: create a task or follow-up, send a bell alert or simulated email, or assign the next salesperson.
4. Turn the rule on or off at any time.

Web forms

What you see: the same page as the Manager.

What you can do: create and edit forms, choosing the fields, lead source and thank-you message. Each enquiry becomes a lead, is assigned to the salesperson with the fewest new leads, and runs your automation rules.

Settings: CRM settings

Image — CRM settings tab

What you can do: turn features on or off, such as leads, lead scoring, generated leads, rule-based lead assignment and passwords at login. Other cards cover transfer approvals, lost reasons and billing defaults.

Settings: Dropdown options

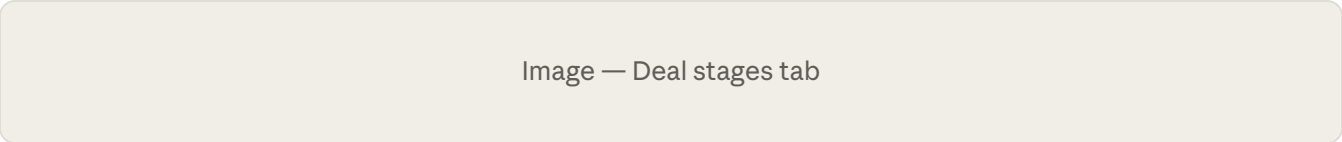

Image — Dropdown options tab

What you can do:

- Add, rename or remove options in lists such as lead source or industry.
- Rename built-in words and workflow statuses. This changes the word everywhere it appears, and the CRM's rules keep working.

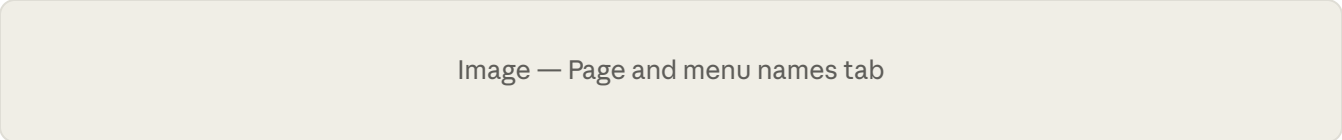

By default, everyone can also add an option while filling in a form, by picking **+ Add new option…** in the dropdown.

Settings: Deal stages

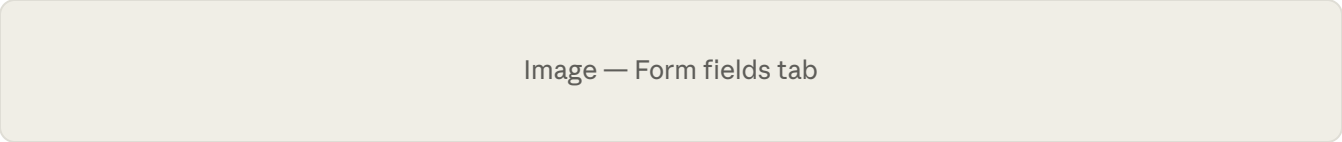

What you can do: add, rename, reorder and remove stages, and set each stage's probability. Removing a stage asks where to move its deals. Won can be renamed, but always stays last.

Settings: Page and menu names

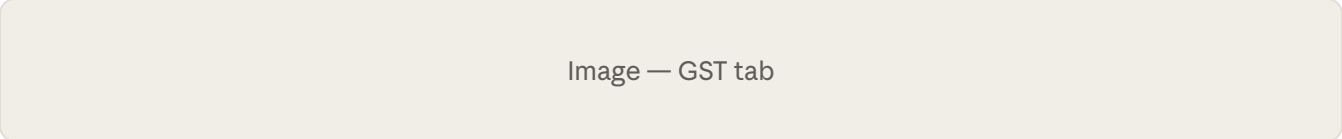

What you can do: rename any page, sidebar heading or workspace, for example All deals to Sales board. Leave a box blank to go back to the default.

Settings: Form fields

What you can do: on seven forms, rename and reorder fields, make them required or hidden, and add your own, such as a GST number. Fields the CRM needs stay required.

Settings: GST

What you can do:

1. Turn on GST, and enter your GSTIN, state and address.
2. Set an HSN code and GST rate on each product, and a GSTIN and state on each customer.
3. New quotes and invoices then split tax. A customer in your state gets CGST and SGST, and any other state gets IGST.

Check rates and wording with your accountant. The CRM doesn't file returns or create e-invoices.

Settings: General & roles

Image — General and roles tab

What you can do: set the company name, support email, business phone number, currency, time zone and fiscal year start.

The tabs after this one are **Activity types** and **Lost reasons**, where you add and edit each of those lists.

Settings: Integrations

Image — Integrations tab

What you can do: turn phone calls, video calls and WhatsApp on or off for everyone, and see what each channel needs to go live.

Settings: Data

Image — Data tab

What you can do:

- Download a backup of the current company, or restore one.
- Find and merge duplicate leads, contacts or customers.
- Reset or clear the demo data.
- Delete the current company.

Inventory

Image — Inventory page

What you see: tracked products, stock value, low and out-of-stock items, movements and warehouses.

What you can do: adjust stock, and record receipts, deliveries and adjustments. Each is logged.

Logistics

Image — Logistics page

What you see: shipments in transit, delayed and delivered, delivery statistics, vehicles and tracking.

What you can do: track shipments, update their status, and edit vehicles.

Quotes & invoices

Image — Quotes and invoices page

What you see: every invoice, quote and payment, with amounts invoiced, collected and outstanding.

What you can do:

- Create invoices and quotes, and record payments.
- Print or save as a PDF, or email the customer.

Other Admin pages

All calls, Messages, Email, Meeting requests, All follow-ups, All deals, All leads, All contacts, All customers, Transfer log, All orders, Products, All cases and the three company reports work as described above, but cover the whole company.

The Admin can also add and edit products, and answer any meeting request sent to them.

4. Connected apps

The Connected apps page shows how the CRM links to your website, accounting, manufacturing and seven other kinds of software. By default, only the Admin can see it. Open it from your name at the bottom of the sidebar.

Image — Connected apps page

App	What it shares	Example systems
Website	Enquiries, products and prices, online orders	WordPress, Shopify, Wix
Accounting	Invoices, payments, customers	Tally, Zoho Books, QuickBooks, Xero
Manufacturing	Confirmed orders, finished stock	Odoo Manufacturing, Katana, SAP Business One
SCM	Shipments and tracking, orders to deliver	Shiprocket, Delhivery, SAP SCM
Inventory & Warehouse	Stock levels and movements	Zoho Inventory, Unicommerce, Odoo Inventory
Procurement	Low-stock items	Zoho Inventory, SAP Ariba
HR, Attendance & Payroll	People and teams, won deals for incentives	Zoho People, Keka, greytHR
Marketing	Contacts, campaign leads	Mailchimp, Zoho Campaigns, Meta Lead Ads
Project Management	Won deals, tasks	Asana, Jira, Trello
Reports & BI	Deals, orders, invoices	Power BI, Tableau, Looker Studio

Connecting an app

Image — Accounting connection

1. Click the app's tile.
2. Choose the system, or pick **+ Add another system…** if yours isn't listed.
3. Tick what to share. Each item says whether it comes into the CRM or goes out of it.
4. Click **Connect**, then **Sync now**.

The sync history lists each run, and **Disconnect** stops sharing. Your CRM data stays as it is. An Admin can give this page to someone else in Access control.

5. What is simulated

The CRM runs entirely in the browser with no server, so nothing leaves it and its data stays on one computer. It's suitable for demos and training, but not yet for live customer data.

Feature	What it does today	What it needs to go live
Logins and passwords	Simulated. Each password is demo1234 until changed, and the data stays readable in the browser	A server with real sign-in
Shared data	Stays in one browser. Other people and devices can't see it	A server and database
Phone calls	Demo screens and a demo business number. No call is made or received	A calling provider such as Exotel, and a server
WhatsApp	Opens WhatsApp with your message ready. Replies are simulated	WhatsApp Business API and a server
Email	Saved as sent, but nothing is sent. Replies are simulated	An email service and a server
Web forms	Work only in the same browser	A server
Connected apps	Connect and sync are simulated, and no data moves	A server and an account with each system

Feature	What it does today	What it needs to go live
Reminders and alerts	Appear only while the CRM is open	A server, and mobile or email alerts
GST invoices	Calculates and prints. Doesn't file returns or create e-invoices	An accountant's check and a GST service
Deal assistant	Fixed rules, not artificial intelligence	An AI service, if you want one

These settings appear in Settings but don't do anything yet: Multi teams, Recurring revenues, Visits to leads, Incoming email, Partner autocomplete, Low stock alerts, Default terms, Fiscal year start and Time zone.
